22

23   **Listing of Claims:**

24

25   What is claimed, is

26

27   1. (Currently Amended)   ~~An~~ A first electronic device for executing an application, comprising:

28

29   •   application data upon execution of said application,

30

31   •   a central control unit for processing said application data according to a locally generated
32   method call,

33

34   •   an interface for transmitting messages to another electronic device,

35

36   •   a synchronization entity for generating a description of said method call and for passing said
37   description to said interface,

38

39   •   said first electronic device comprising
40   •   the application data upon execution of said application,
41   •   said central control unit for processing said application data according a locally
42   generated method call,
43   •   said interface for transmitting messages to said second electronic device ,
44   •   said synchronization entity for generating a description of said method call
45   and for passing said description to said interface,

46

47   •   said another electronic device comprising
48   •   a copy of said application data ,
49   •   another interface for receiving messages from said first electronic device,

50   • another synchronization entity for receiving said description from said

51   interface and for deriving a method call from said description being executable

52   on said second electronic device , and

53   • another central control unit for processing said copy of application data

54   according to said derived method call,

55

56 • a register for storing descriptions of method calls that could not be transmitted to said other

57   electronic device, wherein:

58

59   said synchronization entity is software implemented,

60

61   said method call is generated in response to an input action,

62

63   said application data represent a state of said application, and

64

65   wherein said method call is an application readable instruction causing a change to said

66   application data when being processed,

67

68 • a log for storing said description,

69

70 •   a rollback entity for reading said log and for verifying said application data, and

71 •

72 •   a session clipboard for shared use.

73

74 2-20 (Canceled)
